# Bs en 15048 pdf file windows

Bs en 15048-1. Bs en 15048 pdf. Bs en 15048.

added two commands 'enableReplication' and 'disableReplication' (noble) SOLR-1179: DocSets can now be used as Lucene Filters via DocSet.getTopFilter() (yonik) SOLR-1116: Add a Binary FieldType (noble) SOLR-1051: Support the merge of multiple indexes as a CoreAdmin and an update command (Ning Li via shalin) SOLR-1152: Snapshot on ReplicationHandler should accept location as a request parameter (shalin) SOLR-1204: Enhance SpellingQueryConverter to handle UTF-8 instead of ASCII only. (Brian Whitman via yonik) SOLR-1321: Add better support for efficient wildcard handling (Andrzej Bialecki, Robert Muir, gsingers) SOLR-1326: New interface PluginInfotialized for all types of plugin (noble) SOLR-1447: Simple property injection. facet.sort values "true" and "false" are also deprecated and replaced with "count" and "lex". (Noble Paul, koji via shalin) SOLR-813: Adding DoubleMetaphone Filter and Factory. (Jason Shepherd, Noble Paul via shalin) SOLR-1083: A DIH Evaluator for escaping query characters. (koji) SOLR-829: Allow slaves to request compressed files from master during replication (Simon Collins, Noble Paul, Akshay Ukey via shalin) SOLR-877: Added TermsComponent for accessing Lucene's TermEnum capabilities. & syntaxes are now deprecated (Jason Rutherglen, noble) SOLR-908 : CommonGramsFilterFactory/CommonGramsQueryFilterFactory for speeding up phrase queries containing common words by indexing n-grams and using them at query time. (Noble Paul via shalin) SOLR-887: A DIH Transformer to strip HTML tags. QuerySenderListener is the only implementation in Solr that implements this, but outside implementations may wish to. (koji, ryan) SOLR-1380: Added support for multi-valued fields (Harish Agarwal via gsingers) SOLR-561: Added Replication implemented in Java as a request handler. (yonik) SOLR-1110: Support sorting on trie fields with Distributed Search. This allows one to use an output field of TemplateTransformer in other transformers, among other things. Rao, Noble Paul) SOLR-795: SpellCheckComponent supports building indices on optimize if configured in solrconfig.xml (Jason Rennie, shalin) SOLR-667: A LRU cache implementation based upon ConcurrentHashMap and other techniques to reduce contention and synchronization overhead, to utilize multiple CPU cores more effectively. (Noble Paul via shalin) SOLR-850: Addition of timeouts for distributed searching. The packaged\_war file is shipped with a JDK logging implementation, so logging configuration for the\_war should be identical to solr-1.3. However, if you are using the jar file, you can select which logging implementation to use by dropping a different binding. (Noble Paul via shalin) SOLR-763: Add support for Lucene's PositionFilter (Mek SembWever via shalin) SOLR-966: Enhance the map() function query to take in an optional default value (Noble Paul, shalin) SOLR-820: Support replication on startup of master with new index. This makes it possible to start a Solr server w/o a core . (noble) SOLR-769: Added support for clustering in contrib/clustering. (Noble Paul via shalin) SOLR-1153: DIH 'deltaimportQuery' is honored on child entities as well (noble) SOLR-1230: Enhanced dataimport.jsp to work with all DataImportHandler request handler configurations, rather than just a hardcoded (dataimport handler. 'snappull' becomes 'fetchindex' 'abortsnappull' becomes 'abortfetch' (noble) SOLR-1145: Add capability to specify an infoStream log file for the underlying Lucene IndexWriter in solrconfig.xml. (Mark Miller, yonik) SOLR-1026: Add protected words support to SnowballPorterFilterFactory (ehatcher) SOLR-739: Add support for OmitTF (Mark Miller via yonik) SOLR-1046: Nested query support for the function query parser and lucene query parser (the latter specified as an undocumented feature in 1.3) (yonik) SOLR-940: Add support for Lucene's Trie Range Queries by providing new FieldTypes in schema for int, float, long, double and date. (Jon Baer, Noble Paul via shalin) SOLR-1065: A DIH ContentStreamDataSource which can accept HTTP POST data in a content stream. You're Reading a Free Preview Page 3 is not shown in this preview. If you are using solrj for bulk update requests you should consider switching to this implementation. (ryan) SOLR-865: Adding support for document updates in binary format and corresponding support in Solrj client. (ryan) SOLR-670: Add support for rollbacks in UpdateHandler. (koji) SOLR-1266: Added stemEnglishPossessive option (default=true) to WordDelimiterFilter that allows disabling of english possessive stemming (removal of trailing 's from tokens) (Robert Muir via yonik) SOLR-1237: firstSearcher and newSearcher can now be identified via the CommonParams.EVENT (evt) parameter in a request. Added tests as well. (David Smiley, Glen Newton, shalin) SOLR-910: Add a few utility commands to the DIH admin page such as full import, delta import, status, reload config. (Georgios Stamatis, Lars Kothhoff, Chris Harris via koji) SOLR-284: Added support for extracting content from binary documents like MS Word and PDF using Apache Tika. Single-valued Trie based fields with a precisionStep will index multiple precisions and enable faster range queries. New methods are introduced in Context for deleting by id and query. Not distributed search compliant. See (yonik, Noble Paul, Akshay Ukey via shalin) SOLR-658: Allow Solr to load index from arbitrary directory in dataDir (Noble Paul, Akshay Ukey via shalin) SOLR-793: Add 'commitWithin' argument to the update add command. To strip HTML tags, HTMLStripCharFilter can be used with an arbitrary Tokenizer. This should be treated as an experimental feature. (Fergus McMenemie, Noble Paul, shalin) SOLR-996: DIH: Add support for DIH field name to be templated. Use SstopTransform to stop further transformers. Note that using a custom IndexReader may be incompatible with ReplicationHandler (see comments in SOLR-1366). (gsingers) SOLR-1274: Added text serialization output for extractOnly (Peter Wolanin, gsingers) SOLR-768: DIH: Set last\_index time variable in full-import command. (Noble Paul via shalin) SOLR-812: Configurable JDBC settings in JdbcDataSource including optimized defaults for read only mode. This patch also added the ability to change the output key for facets in the response, and optimized distributed faceting refinement by lowering parsing overhead and by making requests and responses smaller. (Fergus McMenemie, Noble Paul via shalin) SOLR-1066: New methods in DIH Context to expose Script details. However, note that the error handling is not immediate as it is with the standard SolrServer. This is useful and more appropriate when one needs to import only some of the entities. (Noble Paul, Akshay Ukey via shalin) SOLR-943: Make it possible to specify dataDir in solr.xml and accept the dataDir as a request parameter for the CoreAdmin create command. This is an advanced debug log file that can be used to aid developers in fixing IndexWriter bugs. (Fergus McMenemie, Noble Paul, shalin) SOLR-989: DIH: Expose running statistics from the Context API. (Noble Paul, shalin) SOLR-1058: DIH: JdbcDataSource can lookup javax.sql.DataSource using JNDI. (yonik) SOLR-1156: Sort TermsComponent results by frequency (Matt Weber via yonik) SOLR-1335 : load core properties from a properties file (noble) SOLR-1385 : Add an 'enable' attribute to all plugins (noble) SOLR-1414 : implicit core properties are not set for single core (noble) SOLR-659 : Adds shards.start and shards.rows to distributed search to allow more efficient bulk queries (those that retrieve many or all documents). (Jon Baer, Noble Paul via shalin) SOLR-1033: Current entity's namespace is made available to all DIH Transformers. This should make plugging into other standard tools easier. (Mark Miller, TJ Laurenzo via yonik) SOLR-822: Add CharFilter so that characters can be filtered (e.g. character normalization) before Tokenizer/TokenFilters. (Noble Paul, shalin) SOLR-1092: Added a new DIH command named 'import' which does not automatically clean the index. (Noble Paul, shalin) SOLR-996: DIH: Expose Context to Evaluators. This allows a RequestHandler or SearchComponent to know when a newSearcher or firstSearcher event happened. SOLR-876: WordDelimiterFilter now supports a splitOnNumerics option, as well as a list of protected terms. Use a jndiName attribute to specify the location of the data source. (Noble Paul, Preetam Rao via shalin) SOLR-540: Add support for globbing in field names to highlight. (hossman via yonik) SOLR-1128: Added metadata output to extraction request handler "extract only" option. See: (ryan) SOLR-617: Allow configurable index deletion policy and provide a default implementation which allows deletion of commit points on various criteria such as number of commits, age of commit point and optimized status. (Wojtek Piasieczny, Noble Paul via shalin) SOLR-811: Allow a "deltaimportQuery" attribute in SqlEntityProcessor which is used for delta imports instead of DataImportHandler manipulating the SOL itself. SOLR-560: Use SLF4J logging API rather than JDK logging. (koji) SOLR-1099: A FieldAnalysisRequestHandler which provides the analysis functionality of the web admin page as a service. (Chris Harris, Mark Miller) SOLR-1256: Show the output of CharFilters in analysis.jsp. This allows replication of solrconfig.xml (Noble Paul, Akshay Ukey via shalin) SOLR-911: Add support for multi-select faceting by allowing filters to be tagged and facet commands to exclude certain filters. (Noble Paul via shalin) SOLR-842: Better error handling in DataImportHandler with options to abort, skip and continue imports. (Ahmed Hamad via shalin) SOLR-886: DataImportHandler should rollback when an import fails or it is aborted (shalin) SOLR-891: A DIH Transformer to read strings from Clob type, top() is implicitly used for the ord() and rord() functions. Use \$skipRow to skip the current row but continue with the document. See also contrib/extraction/CHANGES.txt (Eric Pugh, Chris Harris, yonik, gsingers) SOLR-819: Added factories for Arabic support (gsingers) SOLR-781: Distributed search ability to sort field.facet values lexicographically. (Fuad Efendi, Noble Paul, yonik via shalin) SOLR-465: Add configurable DirectoryProvider so that alternate Directory implementations can be specified via solrconfig.xml. (Noble Paul, shalin) SOLR-1076: JdbcDataSource should resolve DIH variables in all its configuration parameters. (Dan Rosher via hossman) SOLR-928: SolrDocument and SolrInputDocument now implement the Map interface. Similar to the PhoneticFilter, but this uses DoubleMetaphone specific calls (including alternate encoding) (Todd Feak via ryan) SOLR-680: Add StatsComponent. See for more info. (ehatcher) SOLR-1235: disallow period (.) in DIH entity names (noble) SOLR-1234: Multiple DIH does not work because all of them write to dataimport.properties. (yonik) SOLR-1292: Fixed performance problem in the StopFilterFactory and simplified code. (Jeff Newburn, Noble Paul, shalin) SOLR-1115: on and yes work as expected in solrconfig.xml. (Noble Paul via shalin) SOLR-988: Add a new scope for session data stored in Context to store objects across imports. (Tom Burton-West, Jason Rutherglen via yonik) SOLR-1292: Add FieldCache introspection to stats.jsp and JMX Monitoring via a new SolrFieldCacheMBean. (Noble Paul via shalin) SOLR-1059: Special DIH flags introduced for deleting documents by query or id, skipping rows and stopping further transforms. (Uwe Schindler, yonik, shalin) SOLR-1038: Enhance CommonsHttpSolrServer to add docs in batch using an iterator API (Noble Paul via shalin) SOLR-844: A SolrServer implementation to front-end multiple solr servers and provides load balancing and failover support (Noble Paul, Mark Miller, hossman via shalin) SOLR-939: ValueSourceRangeFilter/Query - filter based on values in a FieldCache entry or on any arbitrary function of field values. (Kay Kay, Noble Paul via shalin) SOLR-801: DIH: Add support for configurable pre-import and post-import delete query per root-entity. The AnalysisRequestHandler is renamed to DocumentAnalysisRequestHandler which is enhanced with query analysis and showMatch support. (Noble Paul via shalin) SOLR-651: Added TermVectorComponent for serving up term vector information, plus IDF. Use the NMTOKEN syntax for matching field names. (hossman) SOLR-1167: Solr Config now supports Xinclude for XML engines that can support it. (Uri Bessess, shalin) SOLR-1106: Made CoreAdminHandler Actions pluggable so that additional actions may be plugged in or the existing ones can be overridden if needed. This can be used, for example, to read XMLs residing as CLOBs or BLOBs in databases. (Ahmed Hamad via shalin) SOLR-938: Add event listener API for DIH import start and end. (ryan) SOLR-847: Enhance the snappull command in ReplicationHandler to accept masterUri. (Noble Paul via shalin) SOLR-1001: Allow variables in various attributes of RegexTransformer, HTMLStripTransformer and NumberFormatTransformer. For example, hl.fl=\* text will highlight all fieldnames ending with .text. See the commented out example in the example solrconfig.xml under the indexDefaults section. Support for both FieldAnalysisRequestHandler and DocumentAnalysisRequestHandler is also provided in the Solrj client. (gsingers, Stanislaw Osinski) SOLR-1175: disable/enable replication on master side. (Mark Miller, Uwe Schindler via shalin) SOLR-1121: CoreAdminhandler should not need a core . This allows user to rollback all changes since the last commit. See (gsingers, Vajjanath N. (gsingers) SOLR-1096: Introduced httpConnTimeout and httpReadTimeout in replication slave configuration to avoid stalled replication. The default DirectoryProvider will use NIOFSDirectory for better concurrency on non Windows platforms. (Preetam Rao, shalin) SOLR-1060: A DIH LineEntityProcessor which can stream lines of text from a given file to be indexed directly or for processing with transformers and child entities. (Lars Kothhoff via yonik) SOLR-906: Adding a StreamingUpdateSolrServer that writes update commands to an open HTTP connection. Supports index replication as well as configuration replication and exposes detailed statistics and progress information on the Admin page. This gets simple statistics on matched numeric fields, including: min, max, mean, median, stddev. (koji) SOLR-1275: Add expungeDeletes to DirectUpdateHandler2 (noble) SOLR-1372: Enhance FieldAnalysisRequestHandler to accept field value from content stream (ehatcher) SOLR-1370: Show the output of CharFilters in FieldAnalysisRequestHandler (koji) SOLR-1373: Add Filter query to admin/form.jsp (Jason Rutherglen via hossman) SOLR-1368: Add ms() function query for getting milliseconds from dates and for high precision date subtraction, add sub() for subtracting other arguments. (shalin) SOLR-1055: Make DIH JdbcDataSource easily extensible by making the createConnectionFactory method protected and return a Callable object. Works on all platforms. (Kay Kay, Noble Paul, shalin) SOLR-1124: Add a top() function query that causes its argument to have its values derived from the top level IndexReader, even when invoked from a sub-reader. (Bryan Talbot via gsingers) SOLR-1478: Enable sort by Lucene docid. (Noble Paul, shalin) SOLR-833: DIH: A DataSource to read data from a field as a reader. (Noble Paul via shalin) SOLR-980: A PlainTextEntityProcessor which can read from any DataSource and output a String. (Noble Paul, shalin) SOLR-934: A MailEntityProcessor to enable indexing mails from POP/IMAP sources into a solr index. (gsingers) Added mincount and maxcount options (Khee Chin via gsingers) SOLR-538: Add maxChars attribute for copyField function so that the length limit for destination can be specified. (Andrzej Bialecki, hossman, Mark Miller, John Wang) SOLR-1214: differentiate between solr home and instanceDir . deprecates the method SolrResourceLoader.locateInstanceDir() and it is renamed to locateSolrHome (noble) SOLR-1216 : disambiguate the replication command names. (Michael Ludwig, shalin) SOLR-1189: Support providing username and password for basic HTTP authentication in Java replication (Matthew Gregg, shalin) SOLR-243: Add configurable IndexReaderFactory so that alternate IndexReader implementations can be specified via solrconfig.xml. Use the handler name as the properties file name (noble) SOLR-1348: Support binary field type in convertType logic in DIH JdbcDataSource (shalin) SOLR-1406: DIH: Make FileDataSource and FileListEntityProcessor to be more extensible (Luke Forehand, shalin) SOLR-1437: DIH: XPathEntityProcessor can deal with xpath syntaxes such as //tagname , /root/tagname (Fergus McMenemie via noble) Useful for auto suggest and possibly distributed search. (ehatcher) SOLR-1449: Add elements to solrconfig.xml to specifying additional classpath directories and regular expressions. ScriptTransformer changed to read scripts through the new API methods. (Nathan Adams, Noble Paul via shalin) SOLR-1003: XPathEntityProcessor must allow slurping all text from a given xml node and its children. (Lars Kothhoff via yonik) SOLR-821: Add support for replication to copy conf file to slave with a different name. (Noble Paul via shalin) SOLR-1062: A DIH LogTransformer which can log data in a given template format. AnalysisRequestHandler is now deprecated. (Patrick O'Leary via shalin) SOLR-799: Add support for hash based exact/near duplicate document handling.

存储一些密码字典（其实就是水仓库的，以后再水一些其他的分享之类的） 25/06/2019 - G-Force Experience is trash and is showing you BS "Optimization". The GTX660 is a 2GB VRAM GPU, so you will have to play on Medium. Also, upgrading from Windows X to Windows 10 is NOT recommended. I would go with clean install. Its that how bad the "Upgrades" are. Also, why use older driver? Make sure you are using a Windows 10 compatible one. This puts the display expressions in their own file. Wireshark still supports preference files that contain the old preferences, but new preference files will be written without the old fields. +\* Support for user-editable "enterprises" file in the personal config dir (overriding system file). //== = Removed Dissectors . diff -git a/enterprises/b/enterprises new file mode 100644 index ... 00 \*\*\*HELP FILE.
